

SYSTEM FOR THE CREATION, VISUALISATION AND MANAGEMENT  
OF THREE-DIMENSIONAL OBJECTS ON WEB PAGES AND A  
RELATIVE METHOD.

5 ABSTRACT

A system for the creation, visualisation and management  
of three-dimensional objects on web pages, suitable for  
allowing access to three-dimensional objects present on  
a web browser of the World-Wide-Web, which are treated  
10 in such a way as to appear to be real objects animated  
on standard web pages, whilst the user can freely move,  
rotate and generally interact with the aforementioned  
objects to best visualise the information present on  
the outer surfaces. The main characteristic of the  
15 present invention lies in the fact that html pages can  
superimpose over the entire surface of the object, so  
that each face of such object behaves like a web  
browser of the standard type, supporting its typical  
functions.
